

Actors and Personas

Project: Aarvii CCTV AMC Management System **Phase:** D0 — Project Foundation Documentation **Source of truth:** requirements-freeze-v1.md §3 (Actors), §2 (Applications), §15 (Engineer Rules)

Four actors are approved for V1. Persona narratives below add context for design work; **permitted actions are exactly those in the freeze document** — personas grant no additional capabilities.

1. Public Visitor

"I need a reliable CCTV AMC provider — show me what you offer and let me ask for a quote quickly."

Attribute	Description
Who	Anonymous user of www.aarvii.in — typically a business owner, facility/office manager, or homeowner evaluating CCTV maintenance
Application	Public Website only (no login)

Goals

- Understand Aarvii's services and AMC plans.
- See proof of credibility (gallery, testimonials).
- Get a quotation or raise an AMC inquiry with minimal friction.

Responsibilities

- Provide accurate contact details when submitting inquiries or quote requests.

Pain points

- Doesn't know what an AMC includes or which plan fits.
- Slow callbacks after submitting interest elsewhere.
- No visibility of whether an inquiry was received.

System interactions (freeze §3)

Interaction	Module
Browse Home, About Us, Services, AMC Services, Contact Us, Gallery, Testimonials	Public Website
Submit contact inquiry / AMC Inquiry	Public Website → Lead Management (auto-creates lead, §10)
Request quotation (Get Quote)	Public Website → Lead Management
Navigate to Login (for existing users)	Public Website → Auth

2. Customer

"I've paid for an AMC — I want to see what I'm getting: visits done, what's due, my invoices, and a quick way to complain when something breaks."

Attribute	Description
Who	AMC contract holder (often via a converted lead); may operate multiple sites
Applications	Customer Portal (web) + Customer App (Flutter)

Goals

- Know the current AMC term status and when it expires.
- See upcoming visits and the history of completed (approved) service.
- Raise complaint tickets and track them to closure; reopen if unresolved.
- Download invoices; request AMC renewal on time.

Responsibilities

- Keep profile and site contact persons (max 3 per site, §6) current.
- Confirm completed work by signing on the engineer's device (§12).
- Report faults via tickets rather than ad-hoc channels.

Pain points

- No visibility of contract coverage or renewal dates → unexpected lapses.
- Can't prove or verify whether maintenance visits happened.
- Complaints disappear into phone calls; no status tracking.
- Chasing the vendor for invoice copies.

System interactions (freeze §3)

Interaction	Module
View own AMC contracts (current active term, §8)	AMC Contracts / Customer Portal
View service history & upcoming visits (approved reports only, §13)	Visit Management / Customer Portal
Raise tickets; reopen closed tickets (§14)	Ticket Management
View & download invoices (PDF, §16)	Invoice Management
Request AMC renewal	AMC Contracts
Update profile; password reset (OTP, §17)	Customer Portal / Auth
Receive Email/SMS notifications (§17)	Notifications

3. Engineer

"Tell me where to go and what to do today — and let me file my report from the site, even with bad network."

Attribute	Description
Who	Aarvii field service engineer executing preventive maintenance visits and ticket work
Applications	Engineer Portal (web) + Engineer App (Flutter, with offline support \$18)

Goals

- See assigned visits and tickets clearly, day by day.
- Complete visit reporting quickly on-site: photos, selfie, GPS, customer signature, remarks.
- Log new faults found during a visit as tickets immediately.

Responsibilities

- Attend assigned visits as scheduled (§11).
- Capture all mandatory completion evidence: selfie, GPS coordinates, ≥ 1 photo, customer signature, remarks (§12).
- Upload before/during/after photos and reports honestly (§12, §15).
- Create tickets for issues observed during visits (§3, §14).

Pain points

- Paper job sheets get lost; rework when office can't read reports.
- Disputes about whether a visit happened or what was done.
- Poor connectivity at customer sites blocks report submission.

System interactions (freeze §3, §15)

Interaction	Module
View assigned visits & tickets	Service Scheduling / Ticket Management / Engineer Portal
Submit visit report (→ admin review, §13)	Visit Management
Upload photos (before/during/after) & videos (§12, §15)	Visit Management / Files
Upload selfie; capture GPS (lat/long/timestamp, §12)	Visit Management
Capture customer signature (§12)	Visit Management
Create tickets during visits (§14)	Ticket Management

Explicit restrictions (freeze §15)

Engineers **cannot**: manage customers, manage AMC plans, manage contracts.

4. Admin

"I run the operation — leads in, contracts signed, visits done and verified, tickets closed, invoices paid. I need one console for all of it."

Attribute	Description
Who	Aarvii Technologies back-office / operations staff
Application	Admin Portal

Goals

- Convert leads into customers with sites and initial AMC contracts (§10).
- Keep AMC plans, contracts, and renewal terms accurate (§8, §9).
- Ensure every AMC's owed visits are scheduled, assigned, and completed (§11).
- Verify field evidence and approve reports before customers see them (§13).
- Keep tickets moving to resolution; issue invoices per contract term (§14, §16).

Responsibilities

- Manage all modules (§3): leads, customers, sites, assets, AMC plans, contracts, scheduling, tickets, engineers, invoices, reporting.
- Review and approve engineer visit reports (§13).
- Reschedule visits and assign engineers (assignment is mandatory, §11).
- Generate and send invoices linked to AMC contract terms (§16).
- Monitor operations via Reporting.

Pain points

- Leads from the website leak without a tracked pipeline.
- Renewals missed because contract history isn't centralized.
- No proof of field work → customer disputes.
- Manual invoice tracking against contract years.

System interactions (freeze §3)

Interaction	Module
Manage lead pipeline; convert Won leads	Lead Management
Manage customers, sites (≤ 3 contacts), asset summaries	Customer / Site / Asset Management
Manage AMC plans (versioned, §9) and contracts/terms (§8)	AMC Plans / AMC Contracts
Generate/reschedule visits; assign engineers (§11)	Service Scheduling
Review & approve visit reports (§13)	Visit Management
Manage tickets (create, assign, progress, close, §14)	Ticket Management
Manage engineers	Engineer Management
Manage invoices (Draft→Paid/Cancelled, PDF, §16)	Invoice Management
View reports	Reporting

Actor × application matrix
